## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamamoto (US 4,357,377). Yamamoto discloses a thermal insulating and bituminous waterproofing board (abstract). With regard to claims 3-5 and 8-10, the waterproofing material is made of a modified bitumen (i.e. asphalt) which has a thickness of 2 to 25 mm (col 6, ln 51-54). The rubberized bitumen generally contains approximately 5-95% by weight of bitumen and approximately 5-95% by weight of rubber and/or resin (col 5, ln 55-58). The resin (i.e. copolymer) can be styrene-butadiene-styrene copolymer (col 6, ln 9-10). The bitumen mixture also contains approximately 20-90% filler material (col 3, ln 64-68 to col 4, ln 1-19). With regard to claim 6, the thermal insulating layer of Yamamoto, which the Examiner is equating to Applicant's impervious surfacing material, is made of polystyrene, polyethylene, or various resins (col 6, ln 59-68). With regard to claim 7, Yamamoto's fibrous sheets, which the Examiner is equating to Applicant's support sheet, can be made of woven or non-woven fabrics (col 4, ln 57-60). With regard to claims 1 and 2, Yamamoto discloses that the bitumen mixture permeates into the fibrous sheets (col 5, ln 19-22), thus meeting Applicant's limitation that the adherent support sheet is composed of material that allows passage of waterproofing material.
